61 ANTHRACITE

DESCRIPTION

Safety low-cut shoe with glass-fibre safety toe cap and anti-perforation insert of type "S". Double-density PU/PU outsole delivers high standard of comfort while not compromising on durability. Upper is made from innovative material PUTEK which ensures even better breathability than leather, together with great endurance and high anti-wear resistance while still preserving very solid water-resistance function. All of these features make BIBURG S3S a perfect choice for everyone, who seeks for breathable, comfortable and durable foot-protection. It is a great solution both for light outdoor jobs as well as for indoor jobs thanks to ESD feature.

MATERIAL

Antipuncture midsole material: composite

Upper material: PUTEK

Toe cap material: glass fibres

Outsole material: PU/TPU

Lining material: polyester mesh

FEATURES

item weight: 620 g

TECHNOLOGY

PUTEK

PUTEK fabric is a very important technological innovation in the field of safety footwear because it transforms the upper into a real barrier of protection. It combines the best function of breathability and waterproofing and thanks to RIPSTOP technology, a reinforcement technique that makes the fabric resistant to tearing, provides resistance to wear and traction while remaining extremely light and flexible. It is crease-resistant and non-deformable, elastic and easy to maintain.
